

LVD ProcessDataAcquisition

This library enables the cycle-related recording of process data. The recorded data can be displayed both in tabular form and graphically in the form of trends.

Predefined recording channels can be activated directly on the terminal. Warning and error thresholds can be defined for each channel and statistical parameters can be displayed.

FEATURES

- Selection of active recording channels directly on the terminal
- Monitoring of definable warning and error thresholds per channel
- Chronological list view of all recordings
- Statistical analysis of the recorded data
- Graphical trend display with measuring line function for detailed analysis of individual data points
