

LVD Japanese Input

The LVD Language Input Extensions were developed specifically to support languages based on complex character systems, such as Chinese or Japanese. The Japanese extension offers a significantly improved user experience through the integration of intelligent word suggestions that adapt dynamically to the context of the input. This extension also supports a phrase-based input system. Users benefit from more intuitive text input, which contributes significantly to user-friendliness.

FEATURES

- Interface for integrating dictionaries into the keyboard
- Depending on the input, suggestions are displayed in a suggestion bar
- Languages without word separators are supported by a new phrase-based input system
