

LVD TextEditor

The LVD TextEditor Library enables the display and editing of text documents. The editor can be used to create new text files and to edit existing ones. It is also possible to define keywords, which are then highlighted accordingly in the text.

The LVD components required for the TextEditor functionality are included.

FEATURES

- Simple editing of text documents directly on the terminal
- Highlighting of text using RegEx for an improved display of keywords or source code.
- Loading and saving files directly from the hard disk
- Use of touch / external keyboard
